

The tools that let a kid *own their future*

A family of tools built on **Bitcoin** and **Nostr** that let you **prove what's true**, **own your own name**, and **move money without asking permission**. No company can freeze you, no platform erases you, no middleman skims your kindness.

1 Your identity — the part that makes you *provable*

NIP-05

Your name is a key

You own **@you@giveabit.io** — a name tied to a secret key only you hold. Anyone can check it in seconds, anywhere, no app.

The checkmark is math, not a corporation's say-so.

LIGHTNING

Money on your name

People send sats straight to that name — instantly, worldwide, with no bank and no freeze button.

Your name is also your wallet address.

DID:WEB

An ID that survives

An identity rooted in the web itself — so even if every social app vanished, you and your proofs would live on.

What you publish today is provable forever.

2 The eight tools — what each one unlocks

HUB

Give A Bit

Learn Bitcoin honestly, keep a name that's yours, spend a sat. The front door to the family.

Education without being watched.

TRUTH

Satohash

Prove a file existed at a moment in time — permanently, on Bitcoin. A receipt anyone can check, forever.

You can prove it happened.

GIVING

Katoa

Fund a cause and the sats land straight in the receiver's wallet. We take nothing for passing the hat.

100% of the kindness arrives.

RIGHTS

SherpaCarta

A Magna Carta for the internet age — 114 articles you sign and stamp on Bitcoin so they can't be rewritten.

Rights you can prove, forever.

CLIMATE

Stranded

2,611 Canadian sites where methane was wasted — capture it, make energy, settle in Bitcoin, cut real CO₂.

Clean the air and pay its own way.

ATTENTION

Tadbuy

Buy ads with sats, no surveillance pixels. Reach people without harvesting them as the product.

Attention bought plainly.

CIVIC OS

OpenStrata

Software for a community to run itself — meetings, reserves, requests — with no black-box vendor.

Run your own house, your own way.

FLAGSHIP

MotoPass

Residency intelligence across 50 countries, every claim stamped in time so you can verify it yourself.

Trust the stamp, not the brochure.

3 Three things this toolset can build

A student climate club that can't be faked

Map methane sites with Stranded, raise funds with Katoa, stamp every receipt on Satohash — so anyone can verify the club's claims in seconds. Trust becomes a feature, not a promise.

Stranded · Katoa · Satohash

A community garden that runs itself

Neighbours govern the garden with OpenStrata and raise seed money through Katoa — every decision and every sat stamped and checkable. The people who built it keep it, forever.

OpenStrata · Katoa · Satohash

A young journalist who can't be silenced

A teen reporter takes a @giveabit.io identity, gets tips in sats over Lightning, and stamps each story on Satohash so sources can't be quietly rewritten. No platform can erase the work.
