

Give A Bit & the family

Give A Bit is a family of open-source, zero-KYC services that treat **Bitcoin as a civic tool** — not a lottery ticket. Every product is built on the same honest spine: identities you can verify, money you can move, and proofs you can keep. **We'd rather show you old truth than new lies.**

Give A Bit HUB

Learn a bit. Keep your name. Spend a sat.

The family home of the suite: zero-KYC Bitcoin education for honest beginners, a live map of real merchants who accept sats, and the @giveabit.io namespace where giving-minded humans and agents are checked, not rumoured. Learn without being watched, keep your identity yours, and put Bitcoin to generous work in the real world.

Checked, not rumoured — that's the whole point.

giveabit.io

Satohash TRUTH

Prove a file existed. Never show the file.

Hash in your browser, anchor to Bitcoin with OpenTimestamps, and walk away holding a .ots receipt that outlives any company. Court-ready and village-checkable — anyone can confirm your proof, even the grandparent with a chessboard lunch — and it costs you nothing at the base.

Proof that outlives its company.

satohash.io

Katoa GIVING

Keep 100%. Give without a platform tax.

Lightning wishlists built for creators, coaches, and civic campaigns, where sats land straight in the receiver's wallet — we take nothing for passing the hat. A skate park, a classroom, a tour: funded peer to peer, fully self-custodied, no middleman skimming the kindness.

Your giving, straight to the hands.

katoa.org

SherpaCarta RIGHTS

A Magna Carta you can stamp.

114 living articles for the algorithmic age, released CCO — yours to sign, share, and read without asking permission. Timestamp it on Bitcoin so your rights stay provable and readable even when platforms quietly rewrite their terms. Rights that don't evaporate when the tech lords change the rules.

Rights you can prove, forever.

sherpacarta.org

Stranded CLIMATE

Waste methane. Honest Bitcoin. Healing.

2,611 public Canadian sites mapped — from open data, not another tax — to find gas that was being vented into the sky. Capture it, turn it into clean energy, settle in Bitcoin, and cut real CO₂e. Civic infrastructure that cleans the air and pays its own way.

Turn stranded gas into living energy.

stranded.giveabit.io

Tadbuy ATTENTION

Buy ads with sats, not surveillance.

A Bitcoin-native way to pay for attention without the tracking pixel as the toll. Built for civic campaigns that refuse to harvest the very people they serve — every sat you spend buys reach, not a dossier. Attention bought plainly, audience left unspied-on.

Reach the people, never the product.

tadbuy.giveabit.io

OpenStrata CIVIC OS

A civic operating system your community actually owns.

OpenStrata is free, open-source software for communities to run themselves — meetings, reserves, member requests, and health, all in one place that is yours to keep. It lets neighbours govern together without a black-box vendor deciding how their house is run. The code, the data, and the decisions stay with the people who made them.

Run your own house, your own way.

MotoPass FLAGSHIP

Residency intelligence stamped in time — not brochure trust.

MotoPass is our flagship residency-intelligence tool: it tracks 50 countries of real, current eligibility conditions and verifies them through a Live Data Engine, with every material claim anchored to a verifiable OpenTimestamps spine. Freshness rings show you when each datum was last proved, and you can check each fact yourself — sats-first, self-custody, no middleman to take your word for it. It turns "I think I qualify" into "I can show you where it says so."

Trust the stamp, not the brochure.
