

Proof of existence — *for the first time*

For all of human history, “trust” has meant **trusting someone** — a notary, a bank, a government, a platform. They held your documents, your money, your name, and asked you to hand over more of yourself to prove you were real. This family of tools changes that. Built on **Bitcoin** and **Nostr**, it lets a person **prove what’s true**, **own their own name**, and **move money without permission** — no middleman, no surrender of identity.

1 Three freedoms, one spine

PROVE

Prove what’s true

Satohash anchors a file to Bitcoin forever. A receipt anyone can check, in seconds, for free — proof of existence that no company can revoke and no regime can erase.

For the first time, “it happened” is checkable, not claimed.

OWN

Own your name

NIP-05 ties a name to a key only you hold. Verifiable anywhere on earth, no ID surrender, no KYC theatre. The checkmark is math, not a corporation’s say-so.

Your identity is yours — not rented from a platform.

MOVE

Move money freely

Lightning sends sats to a name — instantly, worldwide, with no bank and no freeze button. Your name is your wallet; your money stays yours.

No middleman skims the kindness.

*Today a document is only as trustworthy as the institution that holds it. A medical record, a land title, a contract, a diploma — each is a claim you must take on faith, from a gatekeeper who can lose it, alter it, or demand more of you to prove it’s real. **We’d rather show you old truth than new lies.***

THE PROBLEM THIS FAMILY EXISTS TO SOLVE

2 Why Bitcoin, why Nostr

Bitcoin is the clock & the notary

A public ledger no one owns and no one can rewrite. It stamps the moment something existed — the world’s first permanent, neutral, unkillable record of time and truth.

Nostr is the identity layer

A name that resolves to a key you hold, not a profile a company rents you. It survives any platform, any app, any regime — your identity travels with you, not with them.

3 How the stamp actually works

01

Hash the file

The document itself never leaves your hands. Only a fingerprint of it is taken — enough to prove it later, not enough to read it.

02

Anchor it to Bitcoin

OpenTimestamps writes that fingerprint into Bitcoin. From that moment, the existence of the file is a public fact no one can rewrite.

03

Anyone verifies, free

A receipt anyone can check, in seconds, forever — no account, no fee, no permission. Old truth, sitting in the open.

What each piece *actually* does

Every tool below is open source, zero-KYC, and self-custody. Together they form a stack a person, a community, or a country can hold — to prove truth, move value, and govern without a black box.

1 Your identity — the part that makes you provable

NIP-05

Your name is a key

You own @you@giveabit.io — a name tied to a secret key only you hold. Anyone can check it in seconds, anywhere, no app, no permission.

The checkmark is math, not a corporation's say-so.

LIGHTNING

Money on your name

People send sats straight to that name — instantly, worldwide, with no bank and no freeze button. Your name is also your wallet address.

Receive value on the same identity you sign with.

DID:WEB

An ID that survives

An identity rooted in the web itself — so even if every social app vanished, you and everything you've proven would live on.

What you publish today is provable forever.

2 The eight tools — what each one unlocks

HUB

Give A Bit

Learn Bitcoin honestly, keep a name that's yours, spend a sat. The front door to the family.

Education without being watched.

TRUTH

Satohash

Prove a file existed at a moment in time — permanently, on Bitcoin. A receipt anyone can check, forever.

You can prove it happened.

GIVING

Katoa

Fund a cause and the sats land straight in the receiver's wallet. We take nothing for passing the hat.

100% of the kindness arrives.

RIGHTS

SherpaCarta

A Magna Carta for the internet age — 114 articles you sign and stamp on Bitcoin so they can't be rewritten.

Rights you can prove, forever.

CLIMATE

Stranded

2,611 Canadian sites where methane was wasted — capture it, make energy, settle in Bitcoin, cut real CO₂.

Clean the air and pay its own way.

ATTENTION

Tadbuy

Buy ads with sats, no surveillance pixels. Reach people without harvesting them as the product.

Attention bought plainly.

CIVIC OS

OpenStrata

Software for a community to run itself — meetings, reserves, requests — with no black-box vendor.

Run your own house, your own way.

FLAGSHIP

MotoPass

Residency intelligence across 50 countries, every claim stamped in time so you can verify it yourself.

Trust the stamp, not the brochure.

*A name that resolves to a key. A receipt that outlives its company. A wallet that no one can freeze. **These are not features — they are the first bricks of a world where you don't have to beg to be believed.***

THE QUIET REVOLUTION

Dreams this toolset *can actually build*

This is not a toy. It is a spine on which institutions can be rebuilt — to cut mismanagement, streamline the truth of documents and persons, and restore dignity to the individual. Here is what that looks like.

1 Verticals — big dreams, real tools

Medical records that belong to the patient

You hold your own records. Prove they existed, share only what you choose, with whom you choose. A hospital can't lose them, a system can't hold them hostage, an insurer can't quietly alter them. Your body, your data, your dignity — for the first time, the patient owns the file.

Satohash · NIP-05 · DID:web

Government without the black box

A citizen proves who they are without surrendering their life story; a government proves where money went without a hidden ledger. Every sat accounted for, every receipt stamped — mismanagement becomes visible, not deniable.

Satohash · OpenStrata · Katoa

Land titles that can't be rewritten

A title stamped on Bitcoin can't be quietly altered, lost in a fire, or erased by a "computer error." Proof of ownership that survives any regime, any disaster, any official who changes their mind.

Satohash · NIP-05

Elections that can be counted and verified

A ballot that can be proven and counted without revealing who you are. Proof of participation, not surveillance — the end of "trust us, the count was right."

Satohash · NIP-05

Credentials that can't be forged

A diploma, a licence, a certificate — stamped so any employer, any border, any court can verify it in seconds, forever. No more "degree mills," no more lost transcripts.

Satohash · NIP-05

Aid that can be audited

Every donation lands where it's meant to, every receipt checkable. Trust becomes a feature, not a promise — donors see it, recipients prove it, no one skims it.

Katoa · Satohash

2 For a ministry, a city, a country

SPEND

Cut mismanagement

Every sat of public money can carry a stamp. The ledger is checkable — waste stops being an argument and becomes a receipt you can open.

DOCUMENTS

Streamline truth

A licence, a title, a contract — verified in seconds, not weeks of filing. The document proves itself. Bureaucracy shrinks because the question "is this real?" already has an answer.

PERSONS

Prove without a dragnet

A citizen proves who they are without handing over their life story. Identity as a key, not a dossier. Dignity stays with the person; the state keeps the proof, not the surveillance.

*Satohash is the quiet infrastructure a state can adopt without building a new surveillance machine. Stamp the spend, stamp the document, stamp the person's proof — and anyone can check it. **Cut mismanagement by making the ledger public. Streamline truth by making it checkable. Leave dignity intact by never demanding the whole life story.***

A PITCH, NOT A DEMAND — THE COUNTRY KEEPS THE KEYS

More dreams, *and the point of it all*

The same spine — proof, identity, value — reaches into every corner of civic life. Here are more of the worlds it can open, how the stamp actually works, and the quiet truth underneath them all.

1 More verticals — the reach of the spine

Supply chains that can't lie

Prove a product is what it claims — from origin to shelf. A coffee bag stamped at the farm, verified at the port, checked at the shop. "Fair trade" becomes a receipt, not a slogan.

Satohash · NIP-05

Journalism that can't be rewritten

A story stamped at publication so sources can't be quietly changed, a photo proven to be from the moment it claims. The record survives the editor, the platform, and the regime.

Satohash · NIP-05

Insurance & contracts without the fine-print war

A policy, a claim, a contract — each stamped so both sides hold the same unalterable truth. No more "we never received it," no more he-said-she-said.

Satohash · NIP-05

Identity for the displaced

A person who loses their papers, their country, their home — keeps a key that proves who they are. An identity no border, no fire, no regime can take away.

NIP-05 · DID:web · Satohash

Research that can't be faked

A finding stamped at the moment of discovery, so priority and provenance are provable. The end of stolen credit and disputed results.

Satohash

Courts that can trust the record

A judge verifies a document's existence and integrity in seconds, without a chain of custody spanning decades. Evidence that proves itself.

Satohash · NIP-05

2 Already in the world — not a sketch

MOTOPASS

50 countries

Residency intelligence stamped in time, so a claim is something you can verify — not a brochure you have to trust.

STRANDED

2,611 sites

Canadian methane sites mapped so wasted gas can become energy, settled in Bitcoin, with real CO₂ cut — not a pledge.

SHERPACARTA

114 articles

A living charter you sign and stamp on Bitcoin, CC0, so the rights cannot be quietly rewritten by the next committee.

ALWAYS

Zero KYC

Open source. Self-custody. Sats-first. No tracking pixels. We would rather show you old truth than new lies.

3 Sovereignty and dignity

*For the first time, a person can be **provable without being surveilled**. You can prove you exist, prove what you did, prove what you own — and still keep your life story to yourself. **That is the dignity part**. Self-sovereignty isn't about hiding; it's about choosing what to show.*

THE POINT OF IT ALL
